

Maintaining Your Aging Airplane in the Modern World of Aviation

Addison Pemberton, his wife Wendy and his sons Jay & Ryan have been repairing old airplanes for over a quarter of a century. Along their journeys in aviation they have found that hardly anything aviation related lasts forever, especially if you don't maintain it. Come and join Addison as he leads us in discussion and demonstration on what goes wrong, why it happens and how to repair the structure or replace it.

Directions: Enter the hangar area through the gate at N. Bradley Road. Follow the signs to the Pemberton's hangar. Use caution for taxiing airplanes and do not enter the airport's non-movement area.

There will be a friendly Representative from the FAASTeam opening the gate for you from 1730-1830. If you are late...call Addison's hangar from the box near the gate. Addison's number is: #44 on the key pad and we will beep you in.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
